CEI Evaluation	04/20/2010	Activity Location:	NJ	By:	STATE	Identifier:	001	Person:	NOMPK	Suborganization:	Found Violation:	NO
NOC Date:		Citizen Complaint:	NO	Multimedia Inspection:	NO	Sampling:	NO	Not Subtitle C:	NO	Day Zero:	04/20/2010	Focus Area:
Eval. Notes:	UPS Ground Freight operates a trucking distribution center for their ground freight customers. Hazardous waste is generated from spillage or discharges from broken containers or boxes during transit. UPS also operates a maintenance garage where one 30-gallon Safety Kleen parts washer is used to clean truck parts during their maintenance repairs. At the time of inspection there was no hazardous waste stored in the building. There were three 55-gallon drums of non-hazardous wastes from spills that happened within the last three months. Although UPS may exceed CESQG quantities of hazardous waste on the months the spilled material is shipped, many times the waste is overclassified or the reported quantity includes inert packing material from the cleanup. AT this time, UPS Ground Freight was determined to be operating as a CESQG. UPS contacts their environmental consultants for the overpacking and waste determination. All waste is shipped to a appropriate disposal facility within three months (if not sooner) from the date of the spill. Employees are trained to handle spills both on and off the trucks. Three hazardous waste manifests were generated from January 2010 to date. No violations were cited during the inspection. The previous RCRA inspection was performed in June 2005 and the facility was determined to be a CESQG with no violations cited.											

No Linked Violations

CEI Evaluation	09/07/2005	Activity Location:	NJ	By:	STATE	Identifier:	001	Person:	NOMM	Suborganization:	Found Violation:	NO
NOC Date:		Citizen Complaint:	NO	Multimedia Inspection:	NO	Sampling:	NO	Not Subtitle C:	NO	Day Zero:	09/07/2005	Focus Area:
Eval. Notes:	This facility was previously insepcted on 6/6/02. No violations were noted during that inspection. The facility is an over the road transporter of various goods. The site consists of a large loading dock where goods are transferred from one trailer to another, and a vehicle maintenance garage. No warehousing is conducted on site. The maintenance garage has one (1) - 30 gallon Safety Kleen parts washer which is serviced quarterly and generates D001 hazardous waste. There is also a 250 gallon above ground used oil tank. This tank is emptied approximately once per month by Safety Kleen. The company also periodically generates hazardous waste from unclaimed freight that cannot be returned to the manufacturer. At the time of inspection, there was no hazardous waste being accumulated on site. The facility is currently CESQG. No violations were noted.											

No Linked Violations

Note: Penalty information associated with an enforcement action is reported with the enforcement action. For enforcement actions associated with multiple violations, the penalty information will be reported with each violation, however, the penalty is only assessed once, regardless of the number of violations associated with the enforcement.

CEI Evaluation	06/06/2002	Activity Location:	NJ	By:	STATE	Identifier:	001	Person:	NORJA	Suborganization:	Found Violation:	NO
NOC Date:		Citizen Complaint:	NO	Multimedia Inspection:	YES	Sampling:	NO	Not Subtitle C:	NO	Day Zero:	06/06/2002	Focus Area:
Eval. Notes:	CESQG REPORT On 6/6/02 this inspector went to the Overnite Transportation Co. (OTC) facility located at 280 Moonachie Avenue, in Moonachie, NJ to conduct a hazardous waste generator inspection. I spoke with Bill Trodden, Service Center Manager. . The facility has a vehicle maintenance garage that has one 30-gallon Safety-Kleen parts washer that uses the 105 petroleum naphtha solvent. The parts washer solvent is changed every 12 weeks by Safety-Kleen and is removed under a tolling agreement. There is also 500-gallon above ground used crankcase oil tank located behind the garage. OTC power washes trucks on a grated, contained pad. The grease/oil/water is pumped into an oil water separator. All storm water grates are also connected to the oil water separator. Water from the system is discharged to the sewer. OTC has a Stormwater permit (SWG-A-019037) and Underground tank permit for a diesel fuel tank (UST-0106210). OTC periodically generates hazardous material waste when freight is unclaimed and can not be returned to the manufacturer or when containers are damaged in transit. The last shipment of D001 product waste was made on 5/15/01. No further shipments were made. An inspection of the freight storage area was done to see if any hazardous wastes were accumulated by the facility. Some forklift batteries were being stored for shipment to the Harrisburg Recycling Center in Mechanicsburg Pa. No hazardous waste was found in storage. OTC is currently in CESQG status. Generator requirements were reviewed with the facility. No violations were identified.
